

WHAT IS INTEGRATED FACILITIES MANAGEMENT?

Integrated Facilities Management (IFM) is a data-driven approach to facilities management (FM) that leverages technology, analytics, and expertise to improve operational efficiency, optimize spend, and boost organizational agility.

With IFM, the end-to-end management of program systems, processes, and maintenance is centralized under a single, outsourced platform.

IFM empowers FM teams to do more and reduce program costs by

- ✓ Streamlining workflows with an industry-leading CMMS.
- ✓ Improving operational efficiencies through customized technology and KPIs.
- ✓ Mitigating service risk with a fully-vetted, top-notch provider network.
- ✓ Increasing program visibility to leverage actionable insights.
- ✓ Enhancing organizational communication, collaboration, and decision making.

With an IFM solution, FM shifts from a tactical function to a strategic action with organizational impact.

It helps organizations:

- ✓ Deliver their brand promises
- ✓ Enhance customer experiences
- ✓ Improve occupant productivity

NEST is a premier IFM provider, recognized for its smart technology, operational excellence, independent service provider network, financial consulting, and more. It is trusted by some of the world's biggest retail brands.
